

■ MahalInnovate — Video Presentation Script & Workflow Guide

Hackathon Presentation Guide | Live Platform: <https://maha-innovate-six.vercel.app>

Target Duration: 3 – 5 Minutes	Target Audience: Hackathon Jury / Evaluators	Roles: Officer ■■ Startup ■ Evaluator ■■
--------------------------------	--	--

■ Part 1: Executive Summary & Core Value Proposition

The Problem: Traditional government technology procurement suffers from 12-to-18 month tender cycles, opaque technical evaluations, and high financial risk when deploying unproven startup solutions across public infrastructure.

The Solution: MahalInnovate is an end-to-end AI-assisted platform built with Next.js 14, Node.js/Express, and Supabase PostgreSQL. It connects public sector challenges with verified DPIIT startups through a transparent 7-stage lifecycle — transitioning validated 6-month sandbox pilots into statewide procurement scale-up contracts.

■ Part 2: Complete 7-Stage GovTech Lifecycle Workflow

Stage #	Lifecycle Stage	Key Operations & System Output	Target Output
Stage 1	Challenge Creation	Government Officer posts public sector problem statement with Indian Rupee budget & timeline.	Supabase Record Created
Stage 2	AI Tech Analysis	AI Assistant parses description into IoT sensors, edge AI algorithms & uptime targets.	Automated Tech Scope
Stage 3	Startup Marketplace	Automated match engine scores DPIIT startups based on technical alignment.	Match Score (>90%)
Stage 4	Proposal & 7-Criteria Scoring	Startups submit proposals; Independent Evaluators score across 7 weighted criteria.	Evaluated Proposal
Stage 5	Pilot Sandbox Telemetry	Officer selects candidate for 6-month trial with real-time KPI progress tracking.	Active Telemetry Sandbox
Stage 6	Independent Validation	Audit Directorate verifies KPI telemetry logs and issues performance certificate.	Official PASSED Certificate
Stage 7	Procurement Scale-Up	Validated solution recommended for statewide rollout with NLP Executive Report.	Rs. 1.2 Cr Scaling Contract

■■ Part 3: Step-by-Step Video Screenplay & Voiceover Script

Scene 1: Introduction & Problem Statement | ■■ 0:00 – 0:45

■ **Screen Action:** Show Landing Page (maha-innovate-six.vercel.app) with smooth scrolling down the 7-Stage Procurement Pipeline diagram.

■ **Voiceover Script:**
"Welcome to MahalInnovate — the Next-Generation GovTech Challenge & Startup Procurement Platform. Traditional public sector technology procurement is often slow, complex, and unstandardized. MahalInnovate solves this by creating a real-time, database-driven lifecycle that connects Government problem statements directly with verified DPIIT startups through transparent pilot sandboxes."

Scene 2: Challenge Creation & AI Analysis | ■■ 0:45 – 1:30

■ **Screen Action:** Switch Role to **Government Officer**. Open `/challenges/create` (Smart Hospital Equipment Maintenance). Click 'AI Analyze Challenge'.

■ **Voiceover Script:**

"As a Government Officer, I create a challenge addressing critical equipment breakdown across 45 District Civil Hospitals. With one click, our integrated AI Assistant parses the problem statement, automatically extracting required IoT sensors, acoustic failure algorithms, 95% target uptime KPIs, and compliance requirements."

Scene 3: Proposal Submission & 7-Criteria Scoring | ■■ 1:30 – 2:15

■ **Screen Action:** Switch Role to **Startup** (MedTech Predictive Systems) & submit proposal. Next, switch to **Evaluator**, open `/evaluation`, adjust sliders, and click 'Submit Score'.

■ **Voiceover Script:**

"Next, MedTech Predictive Systems submits a comprehensive technical proposal. The proposal automatically enters the Evaluator Pending Queue. An Independent Evaluator scores the submission across 7 weighted criteria — including Problem Fit, Technical Feasibility, and Cost Effectiveness. Submitting the evaluation score atomically updates the status to 'Evaluated' and forwards it to the Government Officer."

Scene 4: Government Review & Sandbox Selection | ■■ 2:15 – 3:00

■ **Screen Action:** Switch Role to **Government Officer**. Open `/proposals`. Show evaluated proposal with scores. Click 'Select for Pilot Sandbox'.

■ **Voiceover Script:**

"The Government Officer reviews the evaluated proposal queue. Seeing an 88% evaluation score and zero audit risks, the officer selects the solution for a 6-Month Paid Pilot Sandbox Trial. This action automatically provisions real-time telemetry records in Supabase."

Scene 5: Telemetry, Audit Certificate & Procurement Scale-Up | ■■ 3:00 – 3:45

■ **Screen Action:** Navigate to `/pilots` (91% achievement progress bar) → `/validation` (PASSED Audit Certificate) → `/procurement` (Rs. 1.2 Cr Scaling Allocation).

■ **Voiceover Script:**

"In Stage 5 (Pilots), we monitor real-time telemetry tracking ventilator uptime and downtime reduction. In Stage 6 (Validation), the Independent Audit Directorate issues an official Passed Audit Certificate. Finally, in Stage 7 (Procurement), the solution is recommended for statewide procurement scale-up across 45 District Hospitals with a Rs. 1.2 Crore budget allocation, complete with an AI-generated Executive Lifecycle Report."

Scene 6: Conclusion & Live Demonstration Link | ■■ 3:45 – 4:00

■ **Screen Action:** Show the Admin Analytics Dashboard (`/admin`) and Landing Page footer displaying live deployment links.

■ **Voiceover Script:**

"MahaInnovate transforms government procurement from a slow administrative hurdle into a transparent, data-driven engine for public sector innovation. Experience the live platform at `maha-innovate-six.vercel.app`. Thank you!"

■ Video Recording Best Practices

- **Browser Settings:** Use Brave or Chrome in Full Screen mode (press F11).
- **Role Switching:** Always highlight the top-right *Role Switcher Dropdown* when toggling between Officer, Startup, and Evaluator.
- **Audio & Video:** Record in 1080p (60 FPS) with a clean noise-canceled microphone.
